Patient Medical Record — PAT-0001

Patient Information

Patient ID: PAT-0001
Patient Name: Nimal Perera
Age: 56 years
Gender: Male
Blood Group: O+
Record Status: Active
Last Updated: 05 August 2026

Disease 1: Type 2 Diabetes Mellitus

Diagnosis Date: 18 March 2021
Disease Status: Active
Severity: Moderate
Diagnosed By: Dr. S. Fernando

Clinical Description

The patient was diagnosed with Type 2 Diabetes Mellitus after repeated elevated fasting blood glucose measurements and an increased HbA1c level. The condition is currently managed with medication, dietary modifications, physical activity, and regular blood glucose monitoring.

Reported Symptoms

- Increased thirst
- Frequent urination, particularly at night
- Increased tiredness
- Occasional blurred vision
- Slow healing of minor wounds
- Increased hunger

Recent Laboratory Results

Fasting Blood Glucose: 142 mg/dL
HbA1c: 7.1%
Random Blood Glucose: 184 mg/dL
Serum Creatinine: 1.0 mg/dL

Current Medication

Metformin

- Dosage: 500 mg
- Frequency: Twice daily
- Route: Oral
- Instruction: Take with meals
- Purpose: Blood glucose management

Treatment Plan

The patient has been advised to continue prescribed diabetes medication, maintain a balanced diet, reduce excessive sugar intake, exercise regularly, and monitor blood glucose according to the clinician's instructions.

Doctor Notes

Blood glucose control has improved compared with previous measurements. HbA1c remains above the individualized target, so continued monitoring is required. No severe hypoglycemic episodes have been reported.

Disease 2: Hypertension

Diagnosis Date: 10 September 2019
Disease Status: Active
Severity: Moderate

Clinical Description

The patient has a history of persistent elevated blood pressure. Hypertension is being managed through medication and lifestyle modifications.

Reported Symptoms

The patient is usually asymptomatic but occasionally reports:

- Mild headaches
- Dizziness
- Fatigue

Recent Measurements

Blood Pressure: 146/92 mmHg
Heart Rate: 78 bpm

Current Medication

Amlodipine

- Dosage: 5 mg
- Frequency: Once daily
- Route: Oral
- Purpose: Blood pressure management

Treatment Plan

Continue prescribed antihypertensive medication. Regular blood-pressure monitoring, reduced dietary sodium intake, regular physical activity, and weight management have been recommended.

Follow-Up

Last Visit: 05 August 2026
Next Review: 05 November 2026

The next appointment will review blood pressure, blood glucose, HbA1c, medication adherence, and general health status.
